Designs

Recommended print settings:

- Ears need **85% infill** (or more) to have enough weight to move back down
- Turn supports on (its very little and easy to remove when you use Cura)
- 3 walls for clean overhang contours
- You can do a manual filament swap at layer 3 and 4 to get the black contours. There are plenty of easy “mid print filament change guides” on YouTube.
- Or just color them in afterwards with some paint
- There are separate files for multicolor printers, as I don't have one myself, I would love to see your creations!

Size:

- Need this hanger for big coats or towels? Just increase the size of all parts by 30-50%! (you can do 150% in X and Y and 130% Z, careful: the hook must be scaled 150% in Y and Z, 130% in X)

No multicolor 3D-Printer?

Just do this for a simple filament swap!

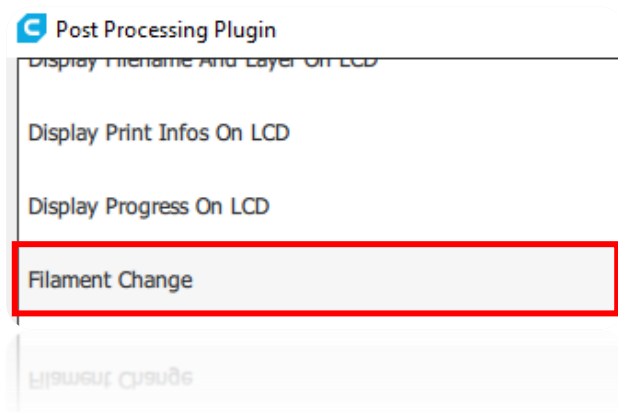

1. Press Modify G-Code

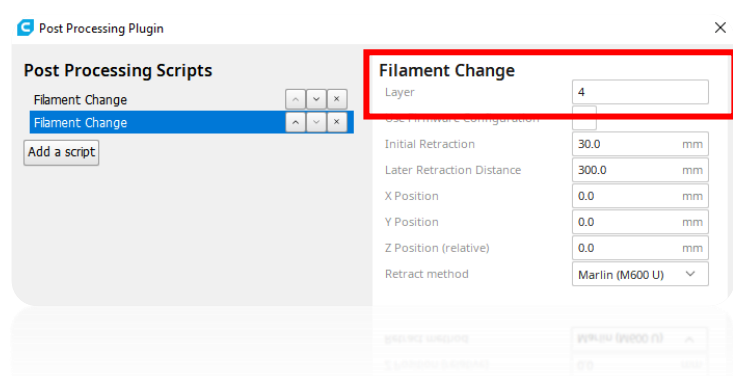

3. Change at Layer 4

2. Add Filament Change

4. Add another swap at Layer 6

5. Example 3mf File included, works similar in Prusa Slicer or Bambu Studio too!

Or look here for an example video:
